W2-S3 *PRACTICE*

CSS SELECTORS & BOX MODEL

At the end of this practice, you should be able to…

Manipulate CSS basics

- Font and color properties
- Margin, padding, border
- Units (px, %, vh, vw, em)
- Pseudo class (hover, active)

How to work?

- ✓ Download **the start code** from the LMS
- ✓ Open the folder in VS Code

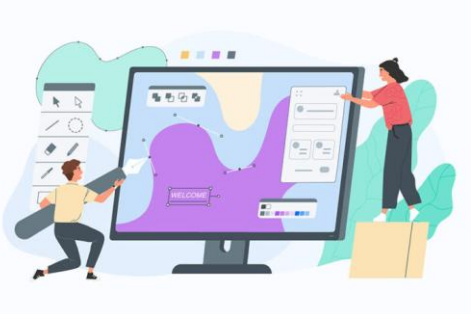

How to submit?

- ✓ **Push** your final code on **your GitHub repository**
- ✓ Then **attach the GitHub path** to the MS Team assignment and **turn it in**

Are you lost?

You can read the following documentation to be ready for this practice:

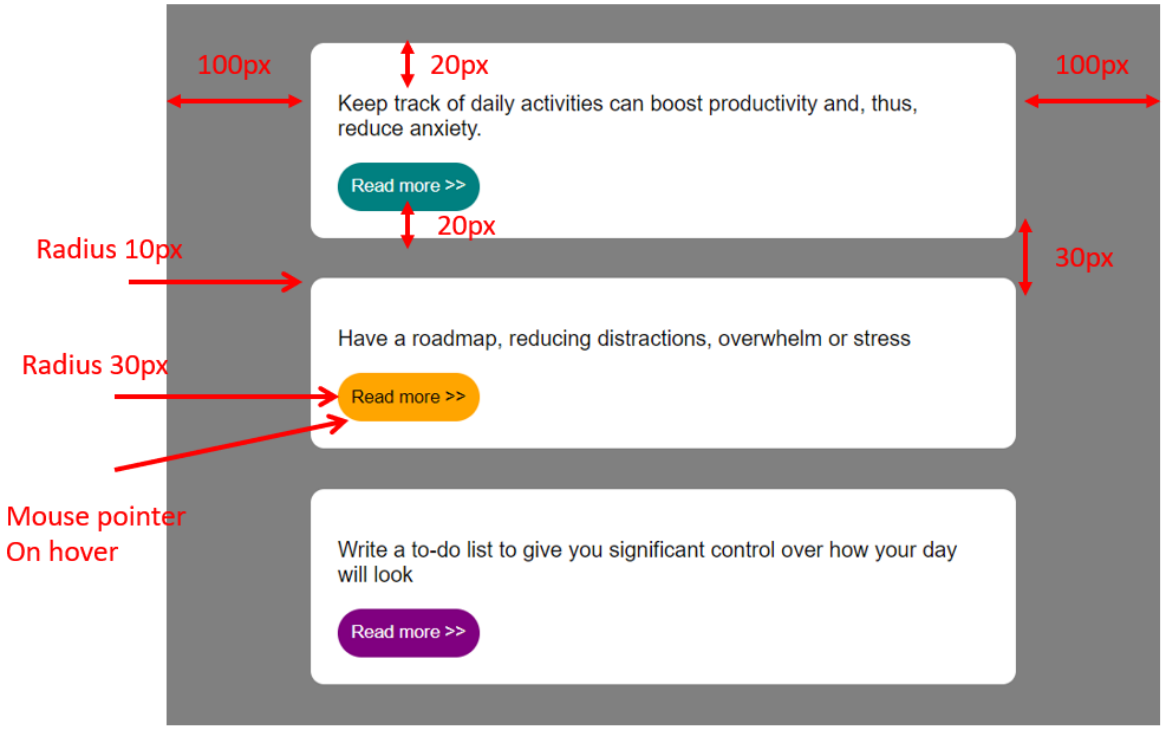

- ✓ Guide - WC3 School
- ✓ Guide - Flexbox properties
- ✓ Video – Flex in 10 minutes!
- ✓ FLEX EXPLORER

EXERCISE 1

Using the CSS attributes, you have learned, build the layout pictured below.

- You need to be as close as possible to the **given specification**
- All buttons have the **same rendering**, expect the colors (green, orange, purple)
- You need to **avoid code redundancy** as much as possible

How to start?

- HTML/CSS start code is provided

Are you lost?

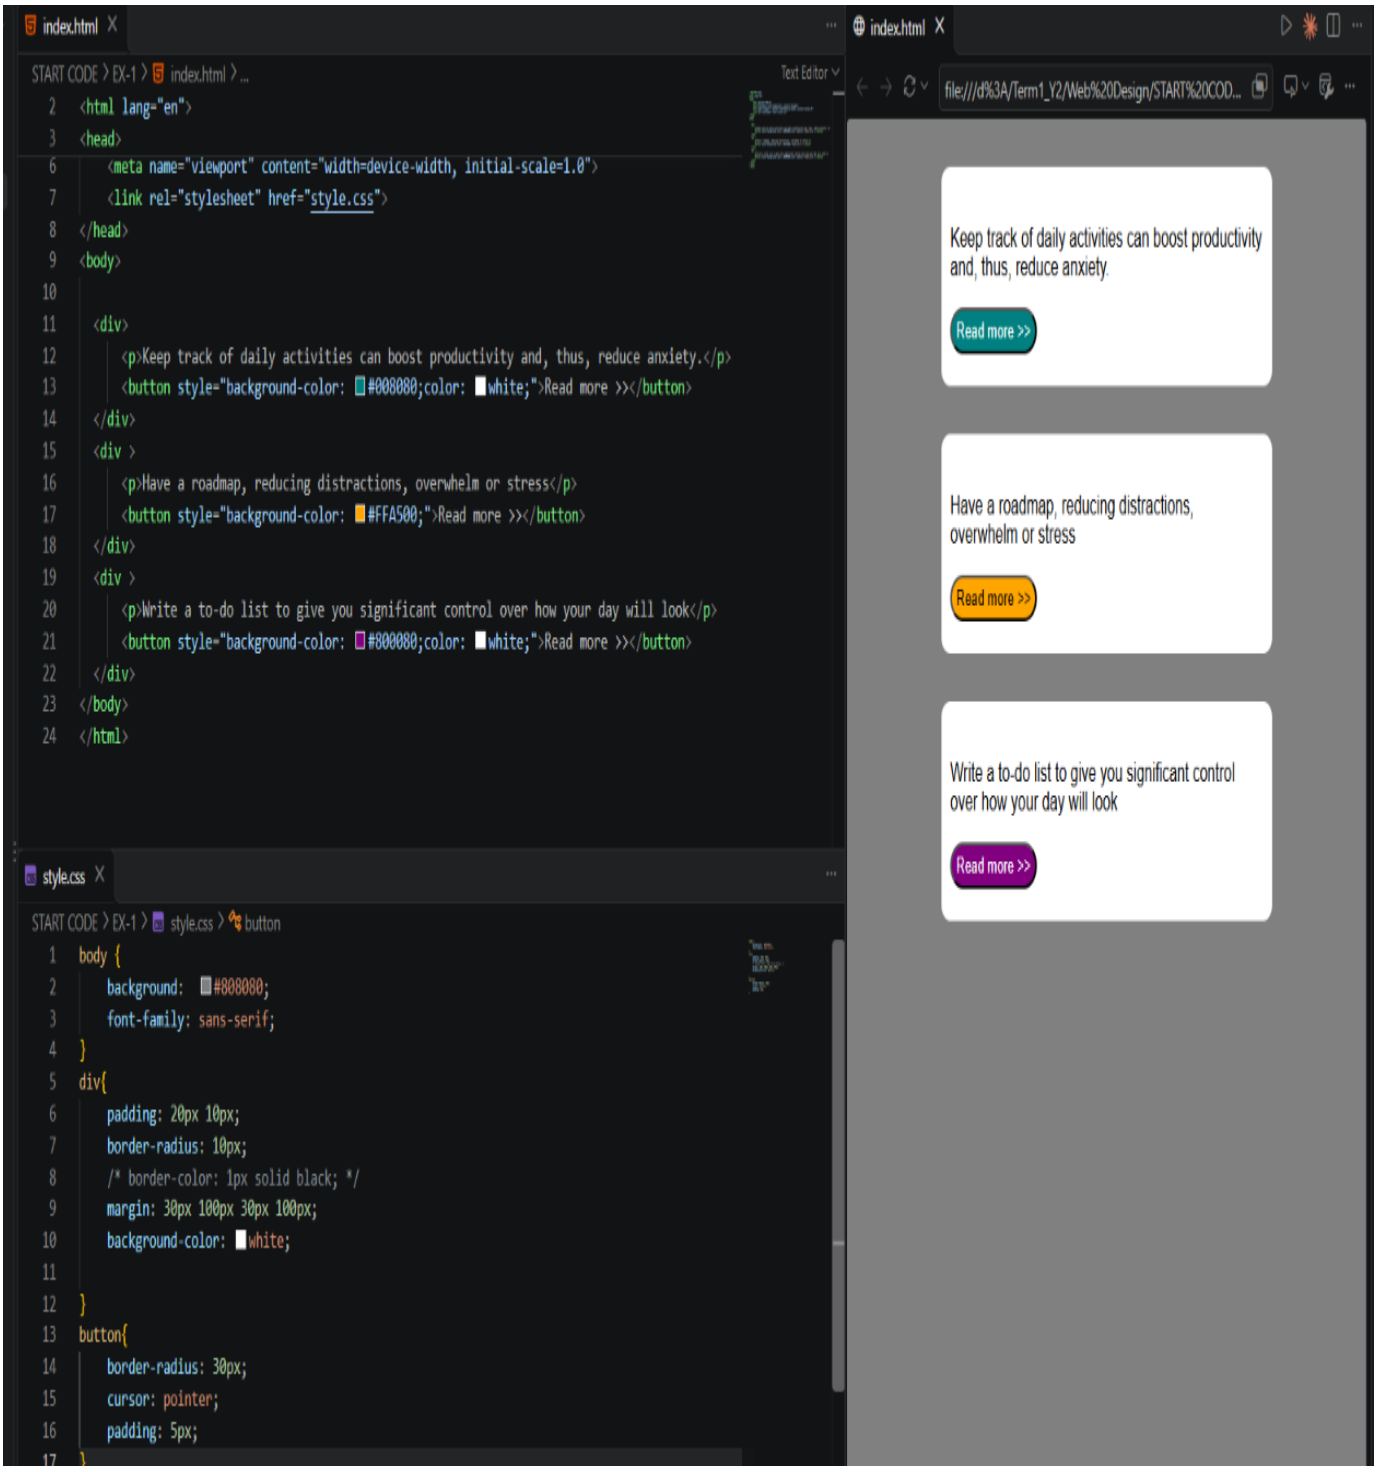

TIP 1 - Here are the CSS properties involved in this exercise:

- ✓ padding, margin, border
- ✓ cursor
- ✓ color, background, border, border-radius

TIP 1 – Think about the CSS selectors you want to use, in order to avoid code redundancy

- Element type selectors
- Class selectors?
- ID selectors?

Exercise 1 Answer

index.html

```
<html lang="en">
<head>
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <link rel="stylesheet" href="style.css">
</head>
<body>

  <div>
      <p>Keep track of daily activities can boost productivity and, thus, reduce anxiety.</p>
      <button style="background-color: #000000;color: white;">Read more >></button>
  </div>
  <div >
      <p>Have a roadmap, reducing distractions, overwhelm or stress</p>
      <button style="background-color: #FFA500;">Read more >></button>
  </div>
  <div >
      <p>Write a to-do list to give you significant control over how your day will look</p>
      <button style="background-color: #800080;color: white;">Read more >></button>
  </div>
</body>
</html>
```

style.css

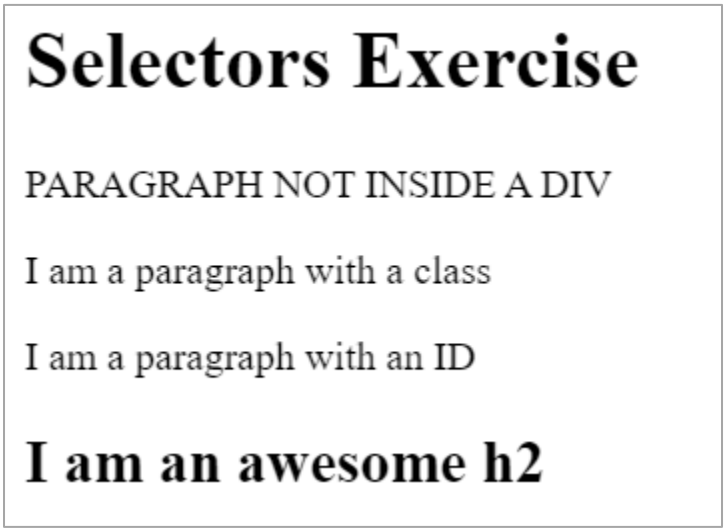

```
body {
    background:  #808080;
    font-family: sans-serif;
}
div{
    padding: 20px 10px;
    border-radius: 10px;
    /* border-color: 1px solid black; */
    margin: 30px 100px 30px 100px;
    background-color: white;

}
button{
    border-radius: 30px;
    cursor: pointer;
    padding: 5px;
}
```

EXERCISE 2

You have 8 challenges, and 6 bonus challenges to perform.

- Each challenge consists of writing some CSS code to match with the requirements
- You cannot change the HTML code; you need to do everything in the CSS file

MANDATORY CHALLENGES

Give the <body> element a background of #bdc3c7
Make the <h1> element #9b59b6
Make all <h2> elements orange
Make all   elements blue (pick your own hexadecimal blue)
Change the background on every paragraph to be yellow
Make all inputs have a 3px red border
Give everything with the class 'hello' a white background
Give the element with id 'special' a 2px solid blue border (pick your own rgb blue)

BONUS CHALLENGES

Note: You may need to research some other selectors and properties

Make all the <p>'s that are nested inside of divs 25px font(font-size: 25px)
Make only inputs with type 'text' have a gray background
Make all "checked" checkboxes have a left margin of 50px(margin-left: 50px)
Make the <label> elements all UPPERCASE without changing the HTML(definitely look this one up
Make the first letter of the element with id 'special' green and 100px font size(font-size: 100)
Make the <h1> element's color change to blue when hovered over

Exercise 2 Answer

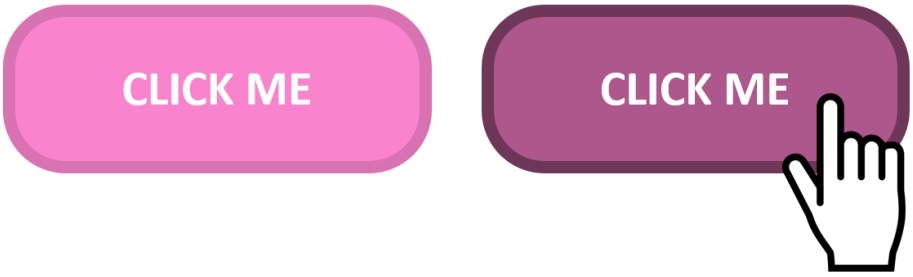

```
/* Style the HTML elements according to the following instructions.
DO NOT ALTER THE EXISTING HTML TO DO THIS.  WRITE ONLY CSS!*/
/* MANDATORY CHALLENGES */
/* Give the <body> element a background of #bdc3c7*/
body {
    background-color: #bdc3c7;
}
/* Make the <h1> element #9b59b6*/
h1 {
    color: #9b59b6;
}
/* Make all <h2> elements orange */
h2{
    color: orange;
}
/* Make all <li> elements blue(pick your own hexadecimal blue)*/
li{
    color: rgb(29, 29, 187);
}
/*Change the background on every paragraph to be yellow*/
p{
    background-color: yellow;
}
/*Make all inputs have a 3px red border*/
input{
    border: 3px solid red;
}
/* Give everything with the class 'hello' a white background*/
.hello{
    background-color: white;
}
/* BONUS CHALLENGES */
/*You may need to research some other selectors and properties*/
/* Make all the <p>'s that are nested inside of divs 25px font(font-size:
25px)*/
div p{
    font-size: 25px;
}
/* Make only inputs with type 'text' have a gray background*/
input[type="text"] {
    background-color: gray;
}
/* Make all "checked" checkboxes have a left margin of 50px(margin-left:
50px)*/
input{
    margin-left: 50px;
}
```

```css
/* Make the <label> elements all UPPERCASE without changing the
HTML(definitely look this one up*/
label{
    text-transform: uppercase;
}
/* Make the first letter of the element with id 'special' green and 100px
font size(font-size: 100)*/
#special::first-letter {
    color: green;
    font-size: 100px;
}
/* Make the <h1> element's color change to blue when hovered over */
h1:hover {
  color: blue ;
}
```

EXERCISE 3

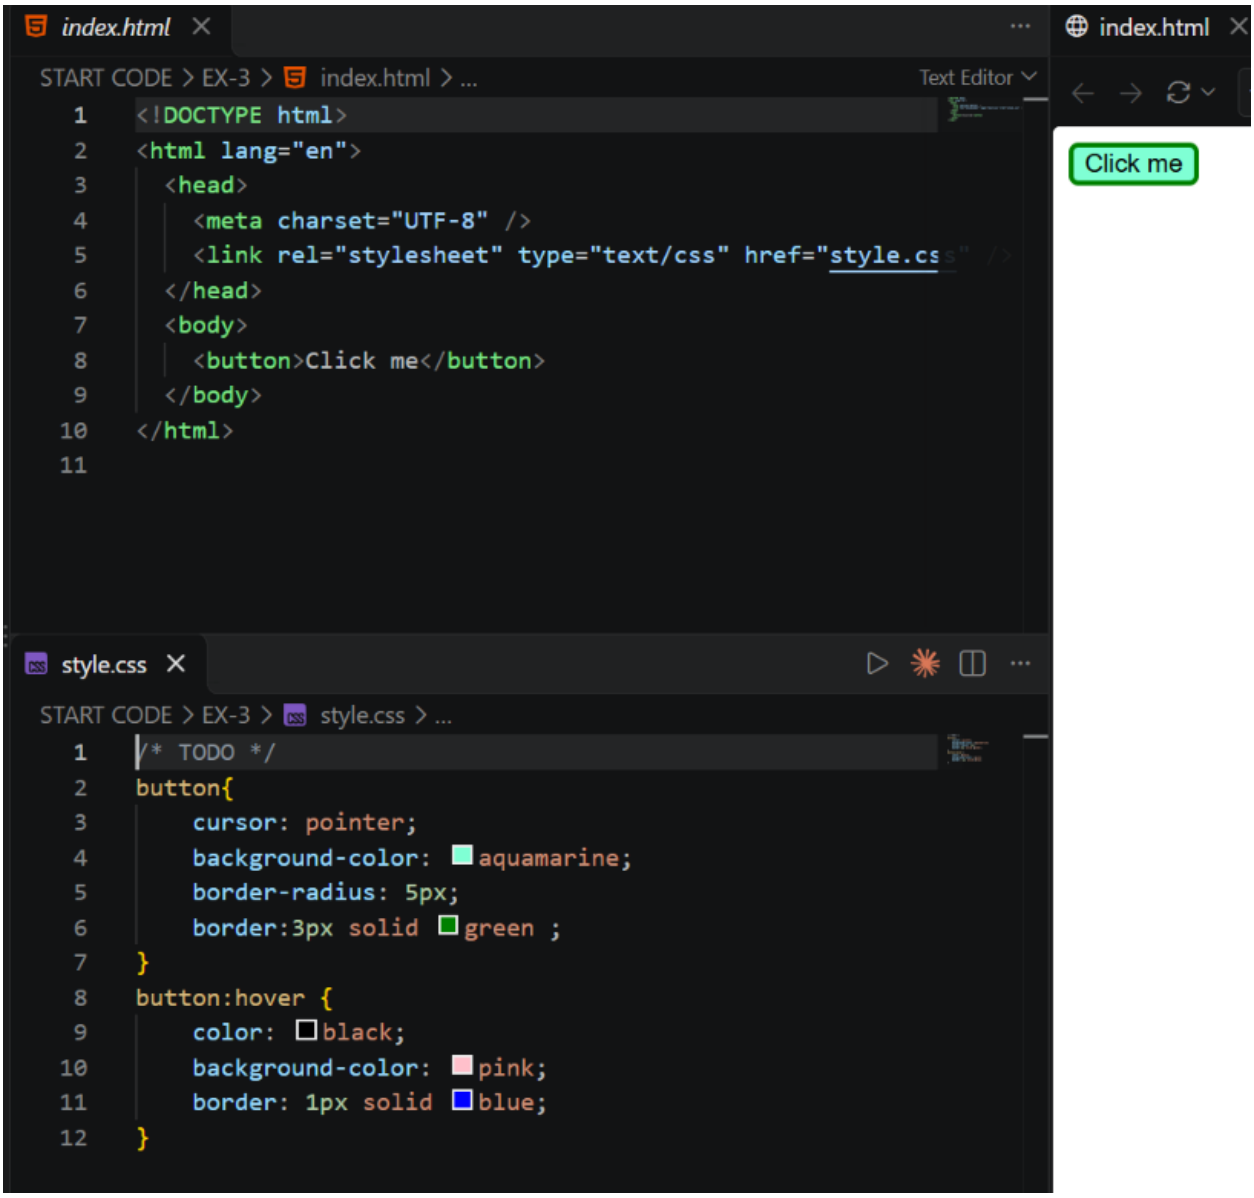

Write the HTML and the CSS code to comply with the below design.

- The button shall change its background and border colors when the mouse is hover

Are you lost?

TIP 1 – You will need to use the **pseudo selector** to change the button color when mouse is hover.
https://www.w3schools.com/css/css_pseudo_classes.asp

EXERCISE 4

Design and implement a profile card. This card should include

- a profile picture,
- a name, a short bio
- a button for interaction

Be creative, you can design this profile card your own way !!

Just an example

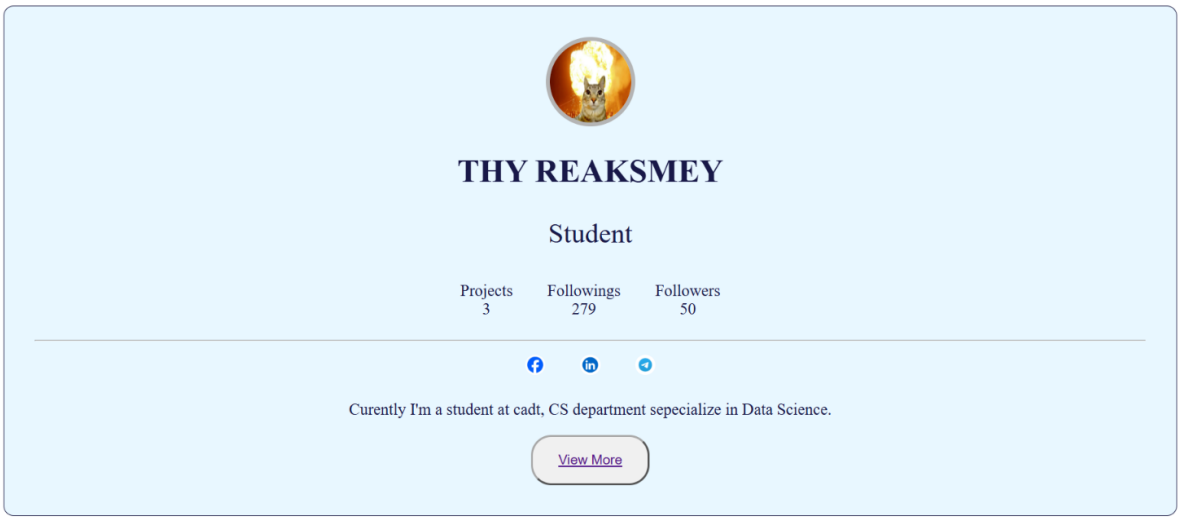

HTML

- A div container for the card.
- An image element for the profile picture.
- A heading for the name.
- A paragraph for a short bio.
- A button for interaction (e.g., "Learn More" or "Contact").

CSS

- Use external CSS for the main styling.
- Apply inline or internal CSS for at least one element to demonstrate understanding.
- Use various font and color properties to enhance the card’s appearance.
- Implement Box Model concepts (margin, padding, border) to create a well-spaced layout.
- Create a hover effect for the button.
- Apply a box shadow to give the card a lifted look.
